

Sharp sets the standard for slim

Establishing a benchmark in slimline television design, Sharp announce their new A33X series – the LC32A33X and the LC37A33X.

These slimline screens incorporate the same unique design as Sharp's previous models but boast a more slender profile, without compromising on quality or style.

Complementing the slimline design, the LC32A33X and the LC37A33X feature a ultra thin bezel and are the perfect addition to any home as a free standing or wall mounted television.

Lightweight and space saving, the A33X series of televisions feature a classy curve design introducing a new level of form, function and style to LCD televisions.

However beauty is not only skin deep. The slimmer profile of the A33X series is achieved with a high-efficiency backlight and high performance speakers, and viewers can experience crystal clear Digital Dolby sound with AUDYSSEY Spatial EQ, enhancing audio quality.

Available in elegant piano black finish, the A33X series is available in a 32 inch and 37 inch screen and are covered by a three year warranty. Both are available now at leading electronics stores nationwide.

RRP LC32A33X \$1,599.99

RRP LC37A33X \$2,199.99
